

EXECUTIVE SUMMARY

The following document is the deliverable D7.8 “Second national workshop” of the WP7 “Communication instruments and dissemination of the project” which provides an overview of the DigiPLACE project results and framework, explained through the online information session held in French for French-speaking audience on 9th July 2020.

Deliverable 7.8 “Second national workshop” is part of the three national workshops (Lead by UL(P11), DEC, PU) that are to be organised during the development of the project. In light of the COVID-19 disruptions and the pressure this has created on WP7, this phase of the project dissemination events have all been turned into online digital events, under the format of webinars.

This was the case for the first workshop – D7.7 – held on 29th April 2020 with a specific focus on construction machinery. This model was replicated for D7.8, which was also held online, but for French-speakers, with the direct support of partners MEEM and CSTB.

This document presents briefly the content of the webinar, as well as the relevant annexes:

- Flyer & Programme
- Slides & recording
